Mateo Robles

Software & Product Engineer

Santa Clara, CA | syberlabs.software@gmail.com | 925-949-3105
github.com/sykosyber | linkedin.com/in/automateon | syberlabs.io/mateo

Software and product engineer building AI developer tools and interactive web products, from architecture to tests and deployment.

EDUCATION

Santa Clara University | B.S. Computer Science, emphasis in Data Science | June 2026

HACKATHON

PorchLight | Third place, Cline, Parallel & Composio Hackathon, San Francisco, Oct 2026

Python, Parallel Search, Composio, gpt-oss-20b | Built in one afternoon with the Cline coding agent

- Agent that routes a neighborhood report to the responsible city agency through cited web search: it refuses uncited claims, drafts reports without sending them and bypasses emergencies.

ENGINEERING EXPERIENCE

SyberLabs | Founder and Lead Developer | 2026-present

SyberWork and GitHits

Python, SQLite, REST APIs, GitHub Actions | GitHits design-partner work

- Built core workflow controls that separate an AI agent's proposed action from permission to execute it, verify external outcomes and retain evidence for review.
- Designed the GitHits API client and Claude Code integration (source filtering, signed call records), built with coding agents under host-run checks; developed parallel test runners and CI checks.

RISE

Lead Developer | JavaScript, Canvas, Web Audio, ffmpeg, Cloudflare

- Led development of a browser reading platform that combines paced text, procedural graphics and sound. Built an offline MP4 pipeline using browser frames, ffmpeg and a SQLite job queue.
- Kept playback timing exact across hidden-tab recovery with a monotonic clock; built unit, browser and Cloudflare deployment checks that caught bundling failures tests missed.

Attest

Python, SQLite, pytest | Documentation verification and repair

- Led development of a pipeline that compiles Markdown into executable checks and evidence reports, with repair workflows that gate application changes on approval and fresh test evidence.

Engines

JavaScript, Canvas 2D, WebGL2 | Interactive generative art

- Built self-contained browser artworks with reproducible simulations, including 3D attractor paths animated by numerical integration.

TECHNICAL SKILLS

Languages: Python, C++ (coursework), JavaScript, TypeScript, SQL, HTML/CSS

Tools: React, FastAPI, GitHub Actions, pytest, Playwright, SQLite, Cloudflare
